Acknowledgement

We would like to extend our heartfelt appreciation and gratitude to the following individuals, whose contributions have been invaluable in ensuring the successful completion of this assignment.

First and foremost, we express our sincere thanks to our supervisor**, Dr. Shiromi Arunathileka**, for providing us with the clear direction and guidance necessary to carry out this study. Her expertise and support have been instrumental throughout this project.

Furthermore, we would like to offer our deepest gratitude to **Mr.Chandana Sirimanna Pathiranage,** the Showroom manager at Vision Care Opticals, Ward Place Branch, and **Mr.Sudarshana Wickramarachchi**, the Human Resources manager at Vision Care Opticals, for graciously providing us with the essential information and for their valuable time. Their insights and cooperation were crucial to the success of our work.

Lastly, we extend our appreciation to all our group members for their dedication and contributions. Every member's effort was pivotal in bringing this project to completion.

Thank you to everyone who supported us in this journey.

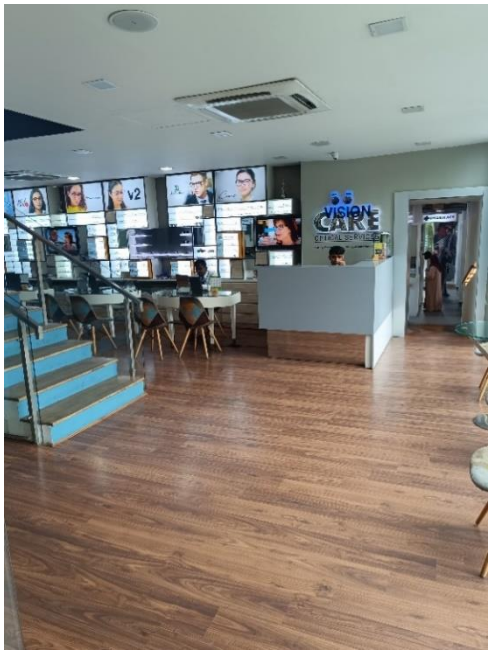
Introduction

Vision Care, having opened its doors on 5th February 1992 at Norris Canal Road, Colombo 10, is currently the Pioneer Eye Care Company in Sri Lanka. While still operating at the same location, it has moved its main practice to a spacious location at No: 06, Ward Place, Colombo 07, Sri Lanka, where its corporate office is located.

They are at the forefront of the technological revolution of eye care field in Sri Lanka. The main reason for success of Vision Care is providing scientifically a good service of well trained optometrists using high -tech Equipment and offering world famous brands of spectacles, contact lenses, sunglasses & other optical /ophthalmic products at reasonable prices.

Vision Care introduced new technologies to the eye care field in Sri Lanka. It is sure to keep up with the fast developing world by improving its service standards, products & technologies in the optical business. Vision care also introduced the Carl Zeiss Optical Coherence Topographer (OCT III) for the first time in Sri Lanka to service their valued customers

Field Visit



Vision

"Enhance Vision, Empower Life"

Mission

- Provide original, genuine and quality products.
- Expand branch network locally and internationally.
- Be the most technologically advanced facilitator in the industry.
- Empower the professionally qualified staff by honoring good judgment and independent decision making.
- Build a sustainable future for all stakeholders.

Company values

Vision Care Opticals focuses on the key principles such as quality, creativity and consumer orientation in the field of optical care services. They stress such core values as professionalism and ethicality, commitment to the clients' vision and their improved welfare.

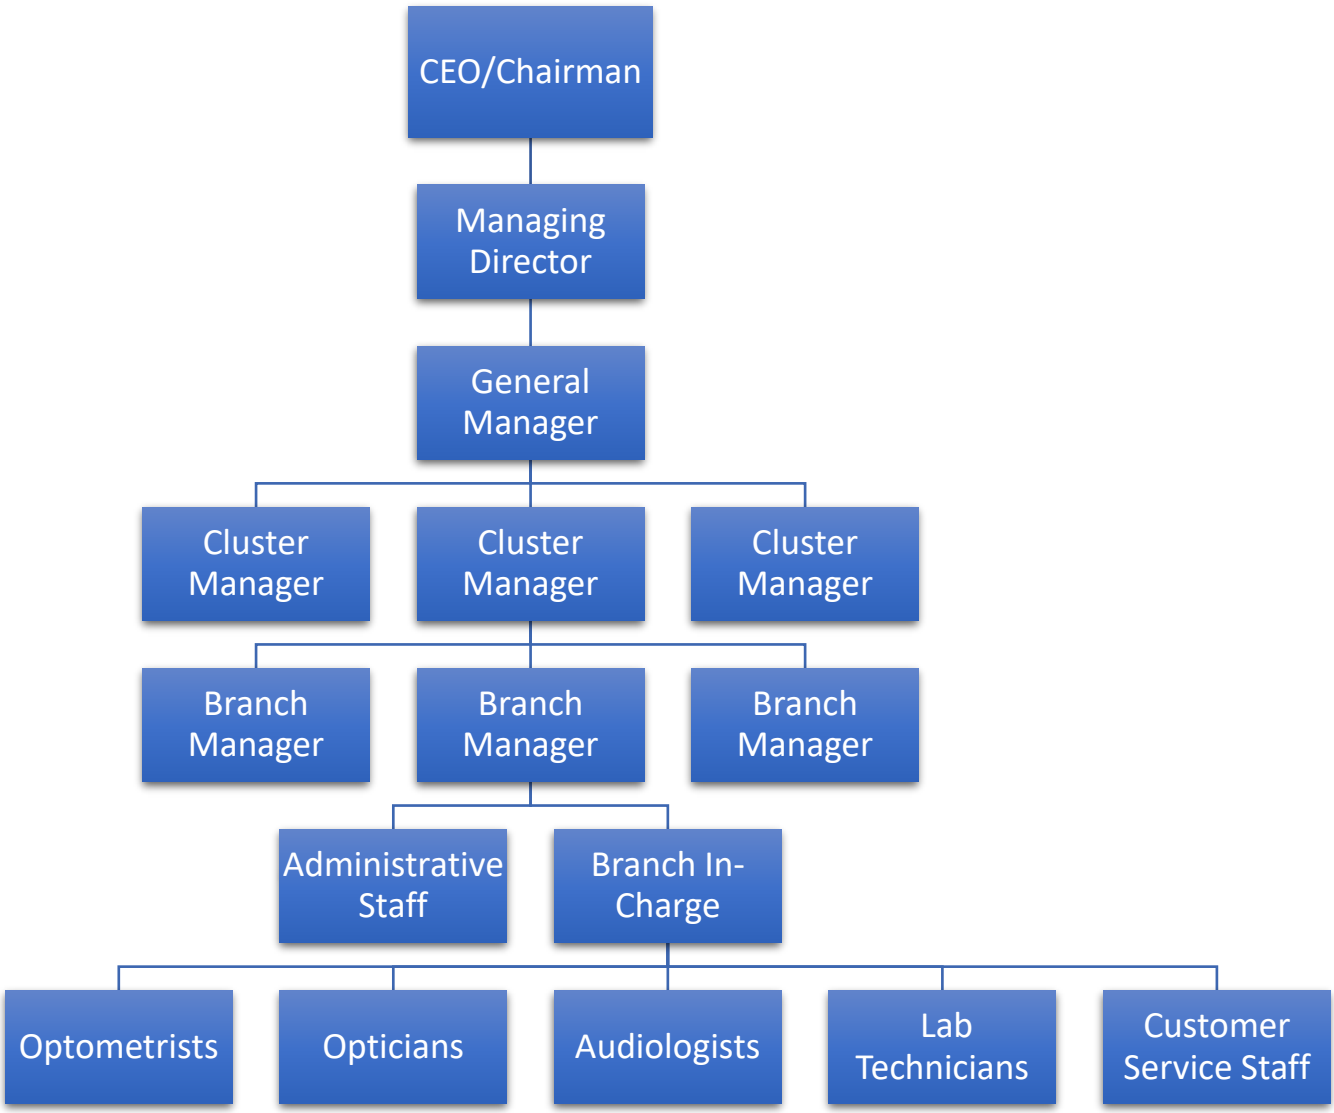
- **Customer Focus:** Focusing on clients by identifying and meeting their needs for quality and innovative eye care goods and services.

- **Integrity:** Promoting factually accurate reporting of news, accurate representation of facts in business and political dealings and overall, being ethical in all business and interaction dealings.

- **Compassion:** Caring about clients as people and providing care in everything completed for clients to enhance the clients' quality of life.

- **Teamwork:** Creating a sense of partnership with other individuals in the course of implementing a given project and appreciating their input and support as well.

Organizational Structure



Product Portfolio

As an Industry leader. Vision Care has consistently demonstrated a steadfast commitment to innovation. Quality and customer satisfaction. So, we can see, The product portfolio of Vision Care in these segments. Vision care opticals focuses on 2 main product categories.

Product Categories

- **Category 1: Products**
  - Optical Needs
  - Contact Lenses
  - Hearing Aids and Accessories

- **Category 2: Services**
  - Eye Investigations
  - Vision Therapy
  - Sports Vision

Category 01 – Products

1. Optical Needs

Frames for Every Style:

- Choosing the perfect pair of glasses is a seamless blend of style and function. It's where your frames not only enhance your look but also sharpen your vision, reflecting both your personality and practical needs.

Sunglasses for Every Occasion:

- Vision Car Sunglasses provide excellent UV protection, enhancing customer comfort and safety during outdoor activities, while also offering a chance to make a fashion statement.

Swimming Goggles:

- Vision Care Swimming Goggles are high-quality products in Sri Lanka. Goggles also protect the eyes from the irritation that can come with the chemicals from the pool is treated with and the materials in the water.

Riders Glasses:

- Vision Care is one of Sri Lanka's leading sellers of riding glasses. Their Riders Glasses provide excellent protection against wind and dust.

2. Contact Lenses

At Vision Care, their goal is to provide customers with contact lenses that not only improve their vision but also enhance their quality of life.

Vision Care has two types of contact lenses.

- **Soft contact lenses**: These are popular for their comfort and are suitable for various vision corrections. soft lenses are ideal for individuals who are active and require lenses that can accommodate a dynamic lifestyle.
- **Hard contact lenses:** Known for their durability and exceptional vision correction, hard contact lenses are often recommended for more complex optical issues and can offer sharper acuity than their soft counterparts.

3. Hearing Aids & Accessories

- Vision Care mainly specializes in glasses but also offers a wide selection of hearing aids. These items are intended to improve the quality of life for those with hearing difficulties by offering current solutions for improved hearing clarity and comfort.

- Vision Care offers comprehensive hearing exams as well as a variety of hearing aid types, ranging from invisible in-ear devices to powerful behind-the-ear choices, all adapted to individual needs. Also, a large range of accessories are available to improve the performance and comfort of hearing aids, including batteries, cleaning kits, and wireless communication devices.

Category 02 – Services

1. Eye Investigations

- Refraction
- Eye Pressure (IOP)
- Visual Fields
- Colour Vision
- Biometry
- Diagnostic Tests
- Orthoptic Assessment

2. Vision Therapy

- Vision therapy at Vision Care is a highly effective, non-surgical treatment method designed to correct visual issues and enhance visual skills.According to the American Optometric Association, a significant part of learning, especially in children up to 80% is visual.Vision therapy is beneficial not only for children but also for adults, as motivated adults often experience substantial improvements in visual skills.

Goals of their Vision Therapy:

- Develop and enhance fundamental visual skills.
- Boost visual comfort and efficiency.
- Modify how visual information is processed and interpreted.

3. Sports Vision

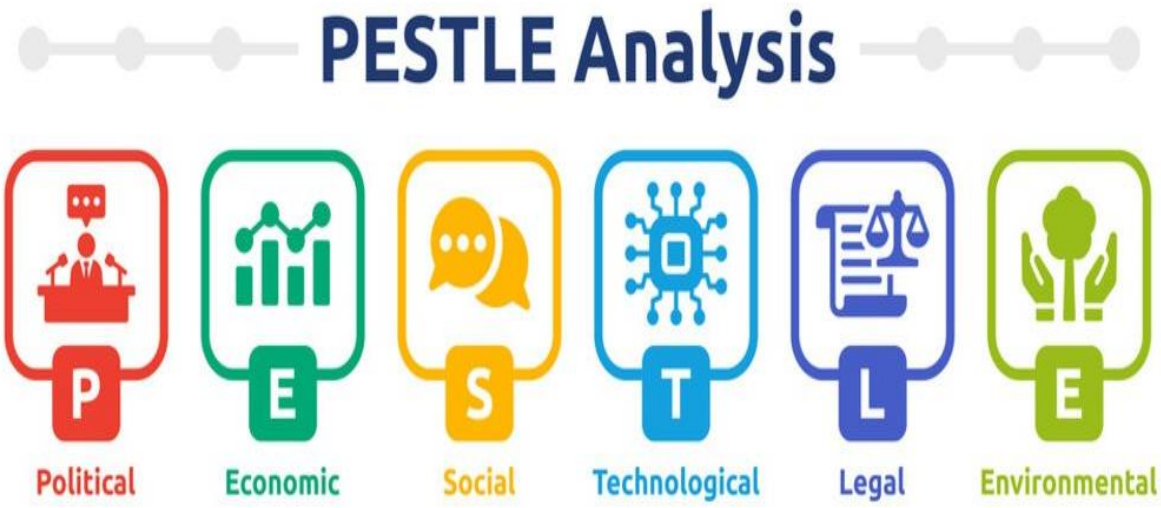
- At Vision Care, Sports Vision is more than just eye care, it’s about optimizing customer visual skills to enhance performance in competitive sports environments. Using advanced technology, their Sports Vision service offers athletes the ability to thoroughly analyse and improve their visual processing abilities, much like the technologies used by professional athletes in the USA, including those in the NHL, NFL, MLB, and NBA.

BUSINESS ANALYSIS

Macro Environmental Analysis

PESTLE Analysis

Pestle analysis is an approach for analysing the external environment in which a business operates.It aids in recognizing several macro-environmental elements that may have an influence on an organization.



1.Political:

These aspects include how government policies, legislation, and political stability affect an organization. These aspects affect Vision Care Optical Services' exterior environment. Tax rules, trade restrictions, and labour laws all have an influence on the company's cost structure, resource availability, and workforce management. Understanding and adapting to political changes is critical for Vision Care to maintain compliance, profitability, and long-term growth in a regulated industry.

Increased taxes on optical services:

- Vision Care Optical Services is impacted by Sri Lankan tax legislation, including VAT and import taxes on medical and optical products. These taxes have an influence on the company's costs and pricing strategies. favourable tax incentives may stimulate the firm to invest in new technologies and commercial development, but higher taxes may raise the pricing of lenses and frames, affecting the company's profitability. Vision Care must constantly adjust to changes in tax legislation in order to remain a viable business.

Government import restrictions on optical related products:

- Trade restrictions on the import of lenses, frames, hearing aids and other medical products impose challenges for Vision Care optical services. Import barriers and laws can raise prices and limit access to new technology. Such limits may force Vision Care to look for other local vendors or adjust their product promotion. Navigating these trade restrictions is critical to maintaining product quality and market competitiveness.

Political Instability:

- The continuous political turbulence in Sri Lanka creates significant challenges for Vision Care Optical Services. Political uncertainty can interrupt ordinary operations and create supply chain issues. These concerns underscore the necessity for Vision Care to create risk-mitigation strategies in the context of political volatility.

2. Economical:

Economic status significantly impacts vision care and optical services. In the optical industry, pricing, demand, and profitability can be greatly influenced by inflation, interest rates, and economic growth.

High Inflation Rates:

- Inflation affects the prices of materials and production in the optical industry. With the increase in inflation, the company might encounter higher expenses for essential materials such as frames and lenses, resulting in elevated prices for consumers. This could impact sales, especially for fashionable eyeglasses that are not considered essential.

Constant Interest Rate Changes:

- Interest rates have a direct impact on the borrowing expenses of both businesses and individuals. Rising interest rates can raise the expenses of financing business growth or technological enhancements. Moreover, higher loan rates can result in customers having reduced funds, restricting their purchases of healthcare products.

Economic Recession:

- Consumer spending declines during economic downturns. In recessions, consumers prioritize needs and reduce their discretionary expenditures, which includes expensive glasses and other optical equipment.This results in a decline in sales for non-essential products.

3. Social:

Vision Care Optical Services' market tactics are heavily influenced by societal variables such as demography, lifestyle changes, and corporate social responsibility. Understanding and adjusting to these cultural changes enables the organization to better satisfy client expectations and increase its community impact.

Corporate Social Responsibility and Community Engagement:

- Vision Care optical services focuses heavily on social responsibility through projects like the 'Nethralokana Sathkara' initiative. This group provides free eyeglasses and extra eye care services to poor regions in Sri Lanka. These actions demonstrate Vision Care's commitment to social welfare and its role as a responsible corporate member of society.

Growth of the Aging Population:

- The increasing population of elderly individuals in different regions is resulting in an increased demand for vision and hearing products, specifically targeted towards seniors such as bifocals, reading glasses, and hearing aids. Vision Care optical services must adapt its products and marketing tactics to meet the needs of this expanding demographic, which offers a substantial chance for market expansion.

Lifestyle Shifts:

- The increased use of digital devices is leading to a greater demand for eyewear that minimizes digital eye strain. Vision Care can seize this opportunity by providing items such as blue light-blocking glasses and emphasizing the importance of routine eye check-ups for health benefits. This shift in lifestyle necessitates new vision solutions that Vision Care can leverage to enhance its market position.

4. Technological:

The success of Vision Care Optical Services relies on technological advancements. The company improves patient care, product options, and customer convenience through the use of advanced eye diagnostic technology, new optical products, and expanding online services. These methods help Vision Care remain competitive in a technology-focused industry.

Cutting edge technology:

- Vision Care utilizes advanced digital eye diagnostic technology like autorefractors and optical coherence tomography (OCT). These technologies accurately assess eye health, allowing for early detection of conditions such as glaucoma and macular degeneration. This improves the accuracy of medication orders and enhances the overall quality of patient care.

Innovations in Optical Products:

- Vision Care Opticals is always making investments in new products, such as blue light-blocking lenses, which help to decrease digital eye strain from extended screen use. Vision Care also provides high-quality lenses with advanced coatings such as anti-reflective and scratch-resistant, giving additional benefits to their clients.

Online Services:

- Vision Care's website offers the convenience and accessibility for customers to purchase prescription glasses, contact lenses, and other optical products. Customers in isolated regions only need to visit the store once to collect their prescription, as products will be delivered to their location afterwards.

5. Legal:

The legal climate has a considerable impact on Vision Care Opticals' activities. This involves following rules and regulations governing consumer protection, employment, health and safety, and intellectual property. Compliance with these regulatory obligations is critical for avoiding legal problems, preserving confidence, and ensuring the company's smooth operation and development.

Consumer Protection Laws:

- Vision Care must comply with consumer protection regulations, including giving clear information on optical product characteristics, costs, and warranties. To comply with regulatory requirements and develop consumer trust, they should have straightforward return, exchange, and refund procedures.

Employment Law:

- Vision Care must follow labour regulations including hiring methods, pay, working hours, and employee benefits. This involves adhering to standards for non-discrimination, health benefits, and safe working conditions to ensure fair treatment of employees.

Health and Safety Regulations:

- Vision Care must follow health and safety rules in the workplace, ensuring that their staff are protected from risks and that correct equipment and processes are in place. This involves ensuring that their optical retail locations and laboratories are clean and safe.

6. Environmental

The environmental aspect focuses on how Vision Care Opticals handles its environmental impact and incorporates sustainability into its practices. This includes enhancing the use of resources, obtaining environmental certifications, and carrying out eco-friendly actions. The company intends to reduce its ecological impact and show its dedication to environmental responsibility by concentrating on these areas.

Resource Management:

- Vision Care Opticals minimizes raw material waste by reusing resources, sourcing sustainable alternatives, and introducing recycling programs. These activities help decrease waste and the company's impact on the environment.

Environmental Certifications and Standards:

- The company seeks to enhance its environmental commitments and image through seeking certifications like ISO 14001 and putting sustainable sourcing policies into practice.

Sustainable Practices:

- Vision Care Opticals can implement environmentally friendly measures by utilizing energy-efficient tools, reducing water consumption, minimizing waste, and transitioning to biodegradable and recyclable packaging.

Porter's Five Forces

The five-force strategic analysis model was first published in 1979 by Michael Porter. It is an essential tool for any strategic analyst engaged in the assessment of an entire industry's competitive position. The forces underpinning Porter's model were designed by the theorist to mirror the complexities with which real strategists had to cope, but they were to be simplified sufficiently to remain manageable for strategic analysis.

Vision care is important to industry, and in a rapidly changing sector with the growing complexity of service delivery, nearly all such related services have room for disruptive innovation. Perceiving the rivalry in this market is important for investors or business owners so they can tackle their problems and have a better chance at success. The vision care market conflict is captured with Porter's Five Forces model: competitive rivalry, the threat of new entrants (new competitors), supplier power, buyer power, and the threat of substitute products or services.

1. Competition or Competitive rivalry - High

In the industry, there is a lot of competition. Vision Care Opticals offers services such as eye health, hearing aids, and other dental facilities, but the central business of Vision Care Opticals is, eye care. The optician industry is closely dominated by a number of opticians, which may include small independent opticians in the area, large chains, as well as online retailers.

When analysing the competitive landscape in the optical industry, we can focus on the below factors.

- **The number of competitors in the industry**

  The optical industry of Sri Lanka is closely similar to many other industries in Sri Lanka, as it has a lot of competitors in the form of service providers. However, a few of them are dominating the eyewear market, it consists of Vision Care, Wickramarachchi Opticians, Eric Rajapakse Opticians, and George Gooneratne Opticians. These key players control the market space mainly because of the wide range of services that they provide and the popularity that they enjoy among the market.

- **Industry growth**

  Industry-wise, the optical industry has a bright prospect for development with predisposing factors such as an increasing number of elderly people, and developments in eyewear technology. The future market is expected to grow due to the increasing demand for corrective products and also the changing consumer trends towards high-quality and innovative products.

- **Similarities in what's offered**

  Technology, quality, and price remain the key areas through which players in the optical industry distinguish themselves from their competitors. For example, Vision Care is recognized for offering products that are sophisticated in terms of technology and quality.

- **Barriers to leaving the industry**

  Major companies like Vision Care make significant investments in costly assets like staff education, technological advances, and regulatory compliance (ex: Vision Care maintains its own school to train its employees). Since they have committed such large expenditures, they are unable to rapidly disengage, even in the face of decreasing demand or lost routes.

  Taking these factors into consideration, it's made clear that **competitive rivalry occurs at a high level.**

2. Potential for New Entrants in an Industry - Moderate

The optician industry needs high entry requirements, especially in order to compete with major companies like Vision Care. This requires investing sufficiently in technology, an intelligent workforce, high-quality services, and spectacular showrooms. While a company may use these large capital investments to enter a market, it also underscores the importance of its presence in the market. This acts as a strong form of entry barrier since new firms may not be in a position to effectively compete in the market.

Here we can measure how much new entrants threaten Vison care.

- **Economies of scale**

  Being a large company, Vision Care long ago reached the high sales volumes necessary to drive down unit production costs. It would be likely that new companies to compete on price in this area, might need to attain the same scale, which is hard or expensive.

- **Product differentiation**

  The fact that established companies like Vision Care possess strong brand identities and loyal customers makes it difficult for new entrants to capture any significant market share, thereby decreasing the threat of entry.

- **Capital requirement**

  The need for expensive equipment and technology, a building to fabricate in, and the rest of the essentials makes startup costs too high.

- **Access to distribution channels**

  Existing firms control the retail stores, online platforms, cable infrastructure, etc. Because of that, new entrants would need to find a way to replicate that structure while competing with the established firms on price, a tricky proposition.

- **Regulations**: Regulatory structures such as licenses, safety standards, educated staff, and many other prerequisites make entry into the market difficult or too expensive.

- **Switching costs**: Although existing firms make it through the money away, customers are not locked in switching from present brands to these newcomers, this could lower barriers slightly. But in between brand identities and customer loyalty, it's harder for new entrants to gain market share, reducing the threat of entry.

Due to these barriers, the potential for **new entrants in the industry is moderate**. Therefore, Vision Care continues its strengths and maintains its competitive edge.

3. Supplier Bargaining power – Moderate

Supplier power is a key driver of Vision Care's operations and profitability. Suppliers in the eye care industry provide vital products including medications, medical equipment, lenses, and frames. The suppliers' ability to impact Vision Care's service offering is determined by criteria such as the level of diversity between the items they sell, the availability of alternative suppliers, and Vision Care's overall importance of these products.

- **The number of suppliers**

  The majority of vision care suppliers are global suppliers. Vision Care imports materials for their production, like frames, lenses, medical equipment, and medications. Using its manufacturing line, Vision Care transforms those imported goods into products that meet customer needs and exceed expectations. In addition, Vision Care works with Luxurious global brand suppliers, including Versace, Gucci, and Louis Vuitton, for sunglasses and frames. This diversity poses a significant threat to the bargaining power of any individual suppliers because Vision Care has the power to shift from one supplier to the other or even use its internal production facilities.

- **Uniqueness**

  There are quality suppliers of frames and other things in the global market. Even though current suppliers are the best in the market, if vision care is needed, they can find alternatives in the market easily. But when it comes to buyers's unique appeal of quality and sophistication from such luxuries as Gucci, Louis Vuitton, and Versace, it may also help enhance supplier power because those are exclusive brands for quality products that cannot be easily replaced.

- **Switching cost**

  Depending on the circumstances, Vision Care's switching costs for the suppliers may vary. For the commonly used production item suppliers, switching costs are not high. Because in the global market, there is no big difference in prices for products vary from one to another. However, for premium brand switching, the cost may be high, and for conventional products, the switching cost will be lower.

Although luxurious brand suppliers have somewhat higher bargaining power, it doesn't significantly impact Vision Care since most of their production doesn't rely on luxurious brands. Therefore, considering these characteristics**, Vision Care's supplier bargaining power can be regarded as moderate.** This is due to their broad supplier base and the ability to switch vendors for basic products.

4. Customer Bargaining power – High

Customers' ability to bargain is an important consideration when assessing market dynamics in the optical business. Customers may influence prices, demand higher-quality services, and transfer suppliers with some ease. Customers' negotiating strength is heavily influenced by factors such as price sensitivity, the availability of alternatives, and their level of market awareness. To maintain a competitive edge and ensure client loyalty, organizations such as Vision Care must understand and manage their clients' expectations and preferences.

- **The number of buyers**

  Competing in the field of optics can be both complicated and demanding as the sector has more than just a large number of clients. The optician industry has clients from basic eye care services to optician clients who go for specialized eye care systems. As a result, it also witnesses a large number of buyers who would normally reduce the bargaining power of each individual buyer, but such demand, when put together may be able to steer the market.

- **Purchase size**

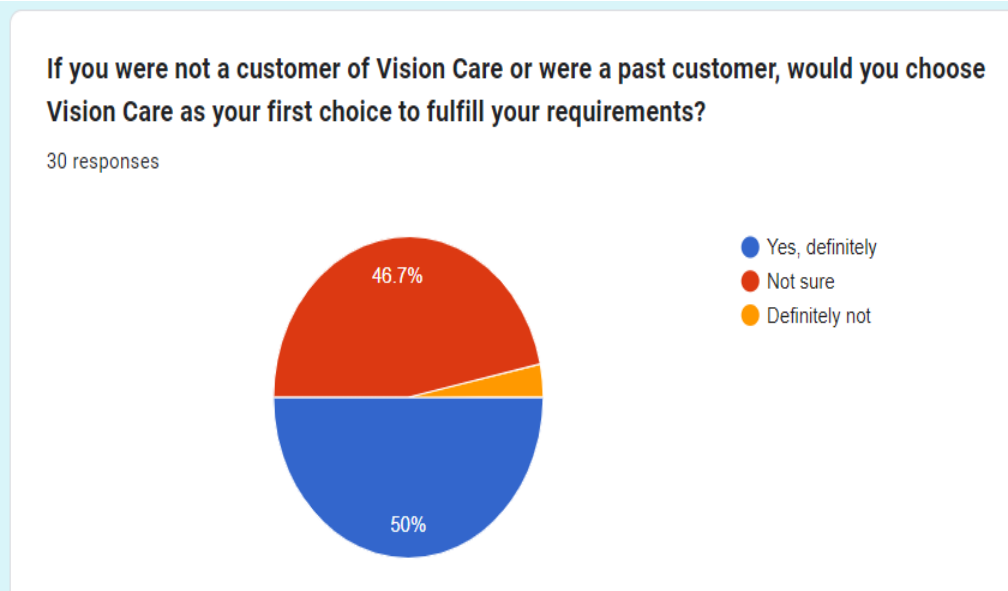
  Individual purchase sizes in the optical industry can vary significantly. While some customers may only need basic eyewear, others might invest in high-end frames, contact lenses, or specialized treatments. Larger purchase sizes can give certain customers more bargaining power, especially if they are frequent buyers or corporate clients.

- **Switching Costs**

  In the optical industry, switching costs are rather low. In the optical sector, clients have the ability and freedom to seek other providers if they find that other places offer better prices or services. This low switching cost improves the customer aggressiveness as it considers all possible measures to win back the clients by offering low prices and better service.

- **Price sensitivity**

  The issue of pricing is crucial for most customers dealing with the optical sector since the cheaper end of the spectrum, like glasses and contact lenses tend to be mass-produced. Quality and image are an essential factor to consider when it comes to high-end customers willing to purchase differentiation treatments or high-niche products. Vision Care is aware of and considers these aims; low prices on the one hand and high image on the other hand.



These explanations, prove that the **customer bargaining power in the optical industry is high** due to a large number of buyers, varying purchase sizes, low switching costs, and high price sensitive

5.Threat of Substitutes – High

The threat of substitutes for Vision Care is one of the forces that affect the company's position in the market and its financial performance. The potential products and services that can help consumers replace the value of the eye care industry substitutes include reading glasses, contact lenses, hearing aids or other services. These substitute products may take a variety of forms, which in turn may affect Vision Care's own customer base depending on the benefits these substitute products offer in terms of convenience, value for money, or technology. The factors included in the threat are the price-performance ratio of the substitutes, the switching cost for the customers, and the perceived value that Vision Care can offer in relation to the substitute offerings. The high threat of substitutes can lead to Vision Care being forced to make improvements and present more value, thus maintaining its competitive advantage.

- **Relative price performance**

  There are alternatives to Vision Care's offering that have different pricing structures. While they offer similar benefits at lower prices, substitutes like contact lenses and reading glasses also present a serious threat. However, the threat is reduced by Vision Care's products, which provide better performance along with additional features that make a higher price point justified.

- **Similar products**

  There are similar products on the market that serve the same purpose as Vision Care's offerings but differ in terms of brand, quality, or technology. These products can attract Vision Care's customers with their offerings like better value, convenience, or innovation.

- **Availability of close substitutes**

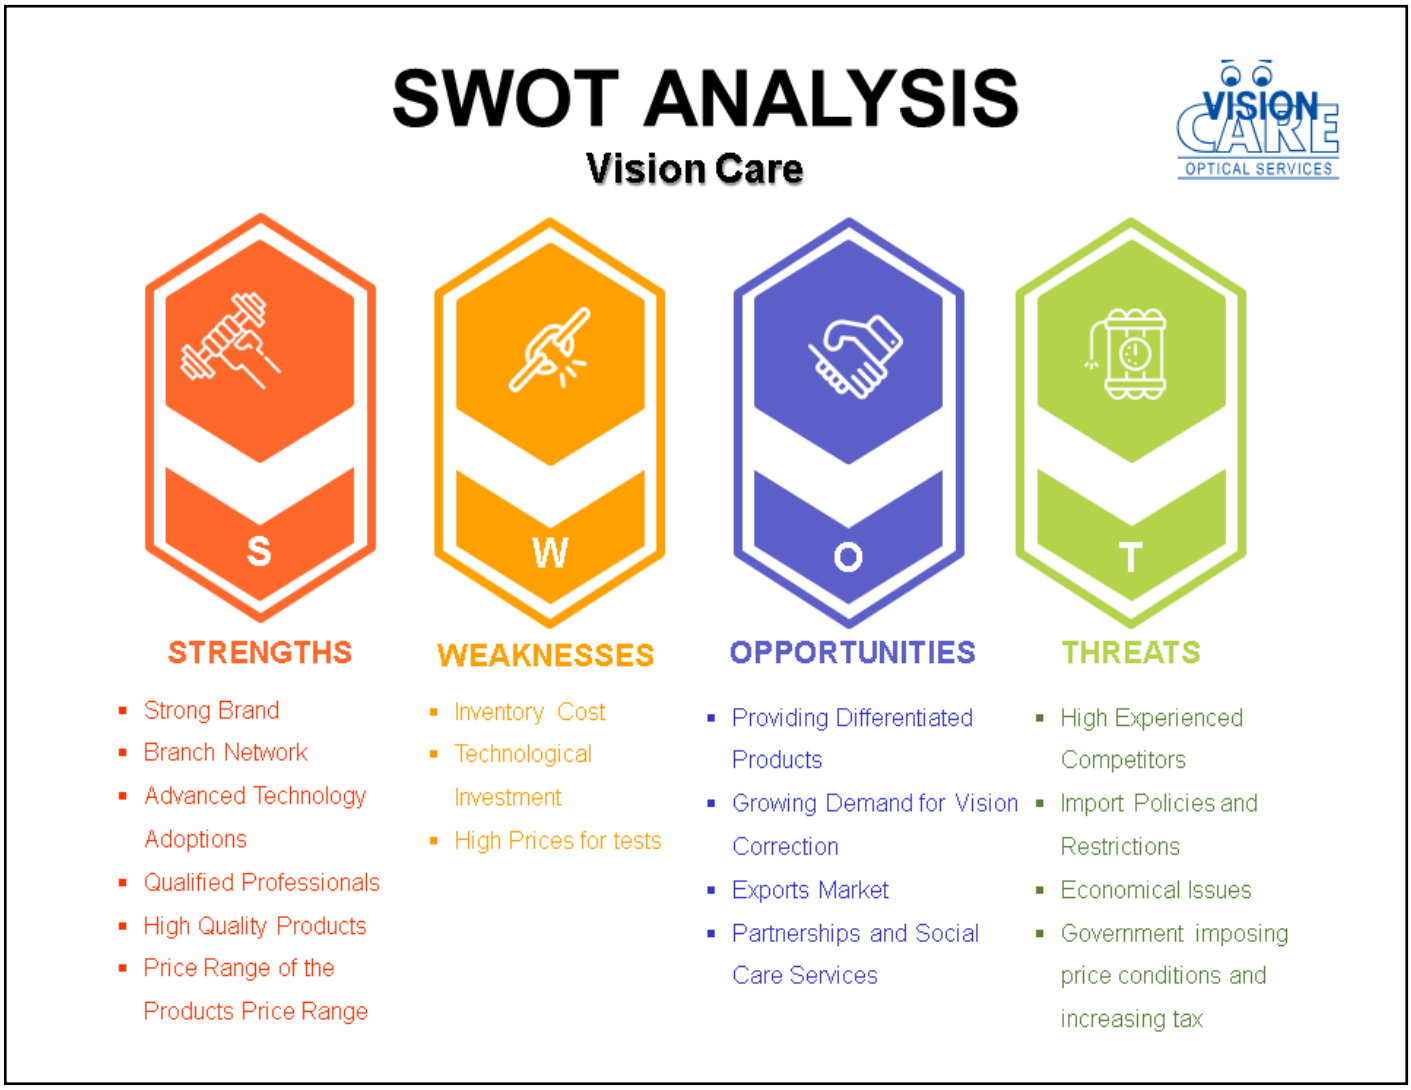
  The concept of close substitutes on the other hand, ensures that a consumer can easily move from obtaining one product to another. Since the substitutes are available in the market and easily accessible, the threat analysis of Vision Care rises.

In general, there is a significant risk of substitutes for vision care. Vision Care is forced to constantly improve its goods and offer better value in order to keep its competitive advantage in the market due to the availability of comparable products with different price-performance ratios and the simplicity with which these alternatives can be switched to.

Micro Environmental Analysis

SWOT Analysis

A SWOT analysis is a valuable strategic planning and management technique for evaluating the internal and external factors that influence an organization's performance. In here, we are looking for the company's internal strengths and weaknesses, as well as the external opportunities and threats it faces. By examining these factors, we aim to provide valuable insights that can guide strategic decision-making and help Vision Care navigate the dynamic and competitive landscape in Sri Lanka.



Strengths

1. Strong Brand

- Established on 5th February 1992, Vision Care Optical Services (Pvt) Ltd. has maintained its presence for nearly 32 years. It has developed a strong and positive reputation and a brand image among the customers as one of the best eye care solution providers in Sri Lanka. During their nearly 30 years of operations, they have successfully become the first company in Sri Lanka to bring the local eye care industry on par with global standards. The main reason for the success of Vision Care is providing high-quality services and products using high technologies in the optical business.

- Having a strong brand recognition and awareness enhances the value of the brand and also can provide a competitive advantage in the industry. It can make it more challenging for newer or lesser-known brands to compete effectively. Vision Care is regarded as one of the most recognized brands globally.

2. Branch Network

- Vision Care has 75 branches, including 4 hospitals, all over the country. They export their products not only around the country but also to other countries such as the Maldives, Bangladesh, and others. During the company visit, the human resources manager expressed their desire to expand their brand into other countries, including New Zealand.

3. Advanced Technology Adoption

- Vision Care is increasingly adopting advanced technologies to enhance their eye care services and other services. These advancements include the use of cutting-edge diagnostic tools like optical coherence tomography (OCT), visual field testing, and automated refraction systems. As the manager said, they are using their own technology to manufacture glasses with a France agreement (51/49). Additionally, online consultation platforms and e-commerce options for eyewear products, hearing aid products and other products are becoming more popular, reflecting the broader trend of digital transformation in the healthcare sector.

.4. Qualified Professional

- There are over 700 employees working in the Vision Care network, with highly qualified professionals including optometrists, audio metrists, dispensing optometrists, and ophthalmologists guided by Mr. Dasantha Fonseka (Senior Optometrist) as the chairperson of Vision Care Optical Services (Pvt) Ltd. These specialists are well-trained in providing comprehensive eye care and hearing care services, from routine examinations to diagnosing and managing complex conditions.

- To cater with well-qualified professional staff, the management of Vision Care has decided to offer in-house training programs. Based on that, Vision Care Academy was established in April 2008 and registered under the Tertiary and Vocational Education Commission (TVEC) in 2011, and Vision Care Academy was recognized as a full-time member by the Association of Schools of Colleges of Optometry (ASCO)—India in 2015. At present, they employ a large number of qualified professionals from the academy.

5. High Quality Products

- Vision Care has introduced high-quality products for the optical industry. They provide a wide range of eyewear, including spectacles, sunglasses, and contact lenses from globally recognized brands such as Carrera, Che, Coach, Ducati, Euro Spex, Giordano, JA9, Manchester, Paris Hilton, Pro Read, etc. And also, they have two of the biggest hearing product brands in the world, such as Oticon and Starkey. By offering products from reputable brands and incorporating the latest advanced technologies, vision care aims to enhance vision and hearing health in the country.

6. Price Range of the Products

- In Vision Care, they have a large price range of products, and the products are priced from Rs. 2500 onwards. All the prices of the products are depending on factors such as the brand of the products, material, and features. Regardless of the customer's economic status, they have the ability to buy quality products that suit their economic status. This way, they can buy products and services from the middle class to the upper class. Because of this, any person in society gets the facility and opportunity to connect with Vision Care.

Weaknesses

1. Inventory Cost

- Vision Care has introduced high-quality products using high-quality goods and advanced technology. This inventory management has been a challenge for Vision Care due to several factors. Most of the materials used for eyecare products, importers in Sri Lanka are exporting products from Italy, Germany, France, and the United Kingdom. They have to bear huge costs for producing new products in Sri Lanka using high-quality materials imported from different countries. This has been one of the major issues for their business.

2. Technological Investment

- Vision Care is adopting advanced technologies to enhance their eye care services and hearing care services. They import machines with advanced technology from different countries to Sri Lanka. As a company, Vision Care has to invest a lot of money to import that technical equipment. This further increases their cost of production. This can be pointed out as another weakness of the company.

3. High Prices for tests

- Eye care services and hearing care services are available in Vision Care, apart from eye care products and hearing care products such as dry eye assessment tests, glaucoma assessment tests, diabetic retinopathy assessment tests, and fundus photography tests. They are using advanced technology and highly qualified professionals for doing those tests. Because of these reasons, a significant amount has to be charged for the services provided through Vision Care. For some people, this is not much of a problem, but due to the current economic situation, some other people are unable to face this situation. This is also a weakness for them as a company.

Opportunities

1. Providing Differentiated Products

- Vision Care has a variety of eyewear products, hearing care products, and services that they offer to their customers. From children and young people to adults, anyone has the ability to get products in any style and at any price range that suits their needs. The company can maintain a good relationship with their customers by communicating accurately about their products and assisting them in choosing from their product portfolio.

2. Growing Demand for Vision Correction

- There are few reasons for growing demand for vision corrections in Sri Lanka. As the elderly population in Sri Lanka is increasing, the use of glasses among them has improved rapidly. And also, the widespread use of computers and smartphones has led to increased eye strain and eye problems among young generations. Therefore, they are inclined to buy eyewear. This is a good opportunity to increase the number of customers they have.

3. Export Market

- As Vision Care has already established its brand image in Sri Lanka, it can choose to expand its operations to other countries. They have already started exporting their products to the Maldives and Bangladesh. And also, the human resources manager said they hope to export their products to New Zealand in the near future. If they conduct comprehensive market research, they will be able to identify the customer requirements and consistently cater to their needs. This will not only increase their market share but also attract new customers who are willing to buy high-quality eye care products and services.

4. Partnerships and Social Care Services

- Vision Care has a great opportunity by becoming partners with other organizations and attending to the social care services. By forming strategic partnerships with international eyewear brands and healthcare providers, Vision Care can enhance its service offerings, introduce high-quality products, and expand its market reach. And also, they are doing some social services with non-governmental organizations and government agencies to provide free or subsidized eye care in underserved communities. This shows their social responsibility profile. Therefore, they have been able to not only build brand reputation but also create opportunities to reach new customers.

SLTA's 105th Colombo Championship

'PAATA SITHTHAM' 2023 Art Competition

Threats

1. High experienced competitors

Many reputable optical service providers with years of expertise in the market compete with Vision Care in Sri Lanka. Competitors with a strong reputation for providing superior eye care services and products include Wickramarachchi Opticians, Eric Rajapaksha Opticians, and George Gooneratne Opticians. These businesses provide a considerable threat to Vision Care because of their extensive experience, devoted clientele, and use of advanced technology. In the optical sector, they are competitors due to their capacity to offer individualized services, competitive pricing, and access to high-end international eyewear brands.

2. Import Policies and Restrictions

Import policies and restrictions pose a potential threat to Vision Care in Sri Lanka, as these businesses rely heavily on importing high-quality eye care products and hearing care products from global suppliers. Government regulations such as import taxes, duties, and restrictions on specific products can increase costs and limit access to the latest and most advanced technologies. Exchange rate fluctuations and delays in international supply chains can further affect pricing and product availability. These challenges may impact the ability of Vision Care to maintain competitive pricing and offer the most advanced products and services to their customers.

3. Economic Issues

Businesses that provide vision care are threatened by Sri Lanka's economic problems. Operational costs can rise due to rising inflation, currency depreciation, and high import costs for advanced technical equipment and high-quality goods. These elements can result in increased costs for eyeglasses, hearing aids, eye care services, and hearing care services. Because of these problems and due to the current economic situation, some other people are unable to face this situation. This Furthermore, consumer spending on non-essential services like quality eye care might be impacted by economic volatility. This is a main treat for the Vision Care Company.

4. Government imposing price conditions and increasing tax

The implementation of price limits and higher levies by the Sri Lankan government presents a considerable obstacle for not only Vision Care but also all the eye care industry. As a result, customers have to buy products and services more than previously. When the government is increasing taxes, it is also a threat to the company. This is also a main treat that the company has to face in the present.

Ansoff Matrix

The Ansoff Matrix is known to be a management tool which is applied in companies to evaluate growth opportunities. It provides four growth strategies based on two factors:

1) **The type of product**
2) **The target market**

<u>The 4 strategies of the Ansoff Matrix</u>

1) Market Penetration
2) Market Development
3) Product Development
4) Diversification

The following four key strategies can be implemented by Vision Care.

1. Market Penetration

This strategy is concerned on increasing sales of existing products in existing markets. It can be marketing, best price strategies, or an increase in the quality of the product to increase sales in the current market.

Focus Areas by Vision Care under Market Penetration:

- **Marketing (Promotions):**
  Participate in promotional activities, customer loyalty programs, charitable/welfare activities etc.

Vision Care celebrated its 25-year anniversary in 2017, by officially launching **'Nethralokana Sathkara'**, and distributed 25,000 spectacles among deserving people in different parts of Sri Lanka.

At present, the company is allocating Twenty-Five Rupees out of each and every sale of spectacle, pair of spectacle lenses and pair of sunglasses, to 'Nethralokana Sathkara'.

Children

Financially supporting schools and pre-schools from socially and economically disadvantaged backgrounds to improve students' opportunities for higher learning.

Humanity

Funding few government hospitals and non-government associations to hire professional counselors and uplifting facilities helping to improve standards of the units.

Sight & Hearing

Providing free eye examination facilities through screening programs across the country and helping to improve their vision and thereby empower those individuals.

Disaster Relief

Providing relief to victims of natural and man-made disasters and helping them rebuild their lives.

These Welfare activities can be identified as an example of promotional campaigns which will help to attract more customers within Sri Lanka.

- **Price strategies:**

  Optimizing pricing strategies and enhance after sales, maintenance services. After sales services at Vision Care include maintenance and support facilities to ensure the clients continue to be supported after their purchases. This will enhance customer loyalty and satisfaction.

- **Quality of the product:**

  Continuously improve the quality of eyewear, lenses, and optical services by adopting the latest technologies, enhancing product durability and design, and providing personalized, top-tier customer care through highly trained professionals.

From the analyses, it is evident that Vision Care provides Loyalty Program through the Loyalty App where customers make points on the items they purchase. Membership levels range from Standard Membership and going up to silver and gold member levels in terms of membership rewards. Customers can exchange the points for any product of their choice, the point system allows that one point is equivalent to one Sri Lankan Rupee. This program makes customers wanting to keep coming back for more of the products.

2. Market Development

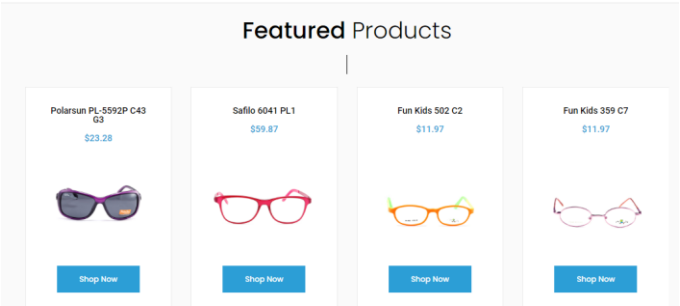
This can be defined as the process of expanding into new markets with existing products. It would be possible for a company to expand in new geographical locations, tackle new segments of consumers or new channels of distribution.

- Under Market Development Vision Care has taken several measures to expand their network to international market as well as local market. This company established the BEHI Vision Care flagship store by partnering with Bangladesh Eye hospital, which gave the opportunity to grow beyond Sri Lanka and target its products to other groups of the population in new geographical locations.

- Similarly, the establishment of partnerships or collaborations with other organizations within Sri Lanka will further assist in the expanding of their market. Vision Care has taken measures to open its outlets in various private hospitals such as Asiri surgical, Golden key, Nawaloka, Central Hospital, KDU hospital etc.

In 2023, Vision Care has opened a new branch at Havelock City Mall.

- Through the Market Development strategy, Vision Care has made a move of opening an online store where both domestic and foreign clients can purchase eyeglasses, lenses, and other optical accessories. This makes the vision care easily accessible across the globe and allows Vision Care to sell their products to other customer segments other than the Sri Lankan market.



3. Product Development

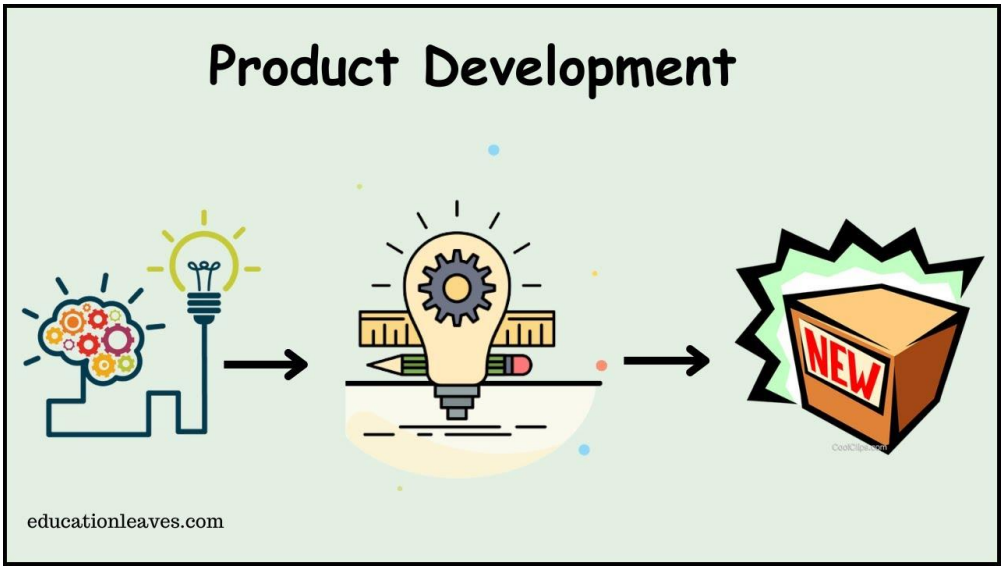
Product Development strategy is used to define the act of introducing new products to an existing market. Business bodies put their efforts into creating new products or modifying the existing ones to satisfy the demand of the current market.

Below Products/Services can be considered as Product Development strategies introduced by Vision Care.

- Contact lenses which is a flexible alternative to glasses.
- Prosthetic eye solutions. (Helps to improve the appearance of people who have lost an eye to injury or disease)
- Sports Vision
- Vision Therapy
- Eye Investigations

For instance, Vision Care could use new services such as eye health technology, digital eye strain solutions or premium lenses to the existing clients. Also, such measures as partnership with technology vendors on smart glasses or implementing AI-based eye health check can also refer to this category.

It is important to allocate resources wisely to balance innovation with cost-effectiveness when entering into such measures.



4. Diversification

Diversification means offering new products to new markets. It's the riskiest strategy, because it involves a new market and a new product at the same time. It may offer the potential for high rewards if executed well.

- Vision Care has considered entering into new market such as providing ENT treatment services and introducing new products. In 2009, Vision care entered into a new market by introducing audiology facilities. This includes provision of hearing tests, diagnostic assessments, conducting hearing test, fittings of hearing aids and provision of other hearing safety products.

This Diversification allowed Vision Care to provide services to both vision and hearing under one brand name.

- Vision Care Mobile Unit provides services to the clients needing eye examination or consultation from the comfort of their homes. This can be taken as another example of diversification strategy since it's a new service provided by this company targeting a new market such as elderly population, disabled clients etc.

- Further, Vision Care might expand to related new areas, such as health and beauty field by opening wellness centres or collaborating with cosmetic companies for eye related cosmetic care products. This expansion can have a positive impact on Vision Care by leveraging the trust already built through its expertise in eye care, making it easier to gain customer confidence in their new cosmetic services.

Therefore, it can be concluded that the Ansoff Matrix provides Vision Care with the necessary structure to find the growth opportunities. By analysing the market penetration, market development, product development and diversification strategy, the company can look for the opportunities for the further development and strengthen the competitive advantage of the company in the industry.

7P’s of Marketing Mix

Introduction

The **Marketing Mix with 7P’s** is a comprehensive framework used by businesses to create and execute effective marketing strategies. It extends the traditional 4Ps (Product, Price, Place, Promotion) by adding three more elements like People, Process, and Physical Evidence to cover all critical aspects of marketing. This approach ensures that businesses consider not only the product and pricing strategies but also the customer experience, the systems in place to deliver the service, and the tangible cues that support a brand’s credibility. The 7Ps model is particularly useful for Vision care opticals where the customer interaction and service delivery play a pivotal role in success.

1. Product

The cornerstone of any marketing mix is the product offering. In vision care, the product encompasses not only physical items such as eyeglasses and contact lenses but also services like eye exams and consultations. Successful companies in this space offer a diverse portfolio that caters to the varied needs of their target market.

Product Variety

Vision care companies typically offer a range of products, including:

- Prescription glasses and lenses
- Contact lenses (daily, weekly, monthly disposables)
- Sunglasses with or without prescription
- Specialized eyewear (e.g., blue-light blocking glasses, sports eyewear)
- Eye care products such as cleaning solutions and drops

In addition to physical products, companies also provide **eye care services** such as eye tests, vision correction procedures (e.g., LASIK referrals), and personalized consultations. Diversifying product lines, such as introducing eco-friendly frames or fashion-forward eyewear collections, can also help attract broader customer segments.

Product Differentiation

The company differentiates its products through:

- **Technology**: Offering lenses with advanced coatings (anti-glare, UV protection, blue light filtering).
- **Customization**: Providing options for custom-fit frames or personalized lens prescriptions.
- **Aesthetics**: Collaborating with designers to create fashionable eyewear that resonates with style-conscious consumers.
- **Innovation**: Integrating virtual try-on technology or augmented reality (AR) to allow customers to see how different glasses look before purchasing.

In terms of business strategy, a **product-focused approach** leverages innovation and customer-centric product development to meet changing consumer preferences. It also strengthens brand reputation as an industry leader in both health and style.

2. Price

Pricing is a critical aspect of the marketing mix. The pricing strategy must balance customer affordability with the company's goal of maintaining profitability and market position. For vision care companies, pricing strategies typically vary depending on the target segment and the level of product customization or technology involved.

Pricing Strategy

- **Premium Pricing**: For high-end or luxury products, such as designer frames or lenses with cutting-edge features (e.g., progressive lenses with multiple focal points), companies can adopt a premium pricing model. This not only appeals to affluent consumers but also enhances the perception of exclusivity.
- **Competitive Pricing**: In a competitive market, vision care companies may price their products similarly to their main competitors, especially for core products like standard prescription glasses or contact lenses.
- **Discount Pricing**: Offering seasonal discounts, bundled deals (e.g., buy glasses and get a free eye exam), or subscription-based pricing for contact lenses encourages repeat business and helps drive sales in more price-sensitive segments.

Value-Based Pricing

- Aligning price with the perceived value of the product is essential. For example, customers may be willing to pay a premium for glasses made from sustainable materials or lenses that offer superior eye protection. The company can also offer different price tiers—basic, mid-range, and premium—to cater to a wide range of customers.
- From a business strategy perspective, the **pricing model** reflects the brand's market positioning—whether it seeks to compete on quality, luxury, or affordability—and influences its long-term customer retention.

3. Place (Distribution)

Distribution, or the “place” element of the marketing mix, refers to how and where a company's products and services are made available to customers. Vision care companies must offer both in-store and online options to ensure accessibility and convenience.

Retail Presence

The company’s physical retail stores allow customers to:

- Try on frames and lenses in person.
- Consult with optometrists for eye exams or personalized advice.
- Receive on-the-spot adjustments or repairs.

E-Commerce and Omnichannel Strategy

In addition to physical stores, having an online platform is critical for reaching tech-savvy customers who prefer shopping online. E-commerce platforms should offer:

- A wide selection of products.
- Virtual try-on features using augmented reality.
- Easy prescription uploads and customization options.

An **omnichannel approach**, where customers can seamlessly move between online and offline channels, strengthens the company's market presence. For example, customers may book eye exams online but pick up their glasses in-store.

By offering multiple distribution channels, the company not only enhances customer convenience but also taps into diverse market segments, from urban professionals to rural communities. The **distribution strategy** directly supports the company’s growth by making products and services widely accessible.

4. Promotion

Promotion refers to the communication strategies used to inform potential customers about products and services. Vision care companies must invest in a range of promotional activities to raise brand awareness, build credibility, and engage their target audience.

Advertising and Public Relations

- **Digital Marketing**: Leveraging social media platforms, search engine marketing (SEM), and display ads to reach different customer segments, such as young professionals or older adults.
- **Influencer Marketing**: Partnering with influencers or fashion bloggers who wear and endorse the company's products.
- **Traditional Media**: TV and radio ads that focus on promoting eye health and the importance of regular eye exams, especially to an older demographic.

Sales Promotions

- Offering **seasonal discounts**, special offers on bundled products, or loyalty programs encourages customer retention. Hosting promotional events such as **free eye test days** or pop-up eyewear shows in urban areas can also drive traffic to physical stores.
- In terms of business strategy, the company's promotional activities must align with its **brand positioning** and broader business goals. For example, a company targeting a premium market segment would focus more on branding campaigns that emphasize product quality and innovation, rather than price promotions.

5. People

In the vision care industry, **people** are central to delivering a high-quality customer experience. This encompasses both customer-facing employees, like optometrists and sales staff, and behind-the-scenes professionals who handle customer service, marketing, and logistics.

Customer-Facing Employees

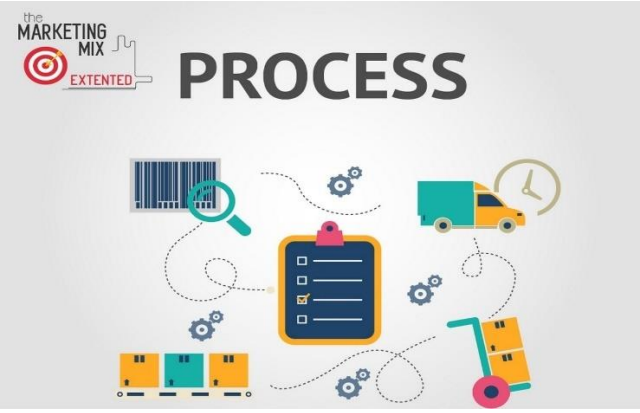
- **Optometrists**: The expertise of optometrists is critical to the company's reputation for quality and care. Skilled professionals conducting eye exams and offering personalized advice build trust with customers.
- **Sales Associates**: Trained sales staff can help customers select the right frames or lenses based on their needs, preferences, and lifestyle.

Customer Service

- Strong customer service, both in-store and online, ensures that customers feel supported throughout their journey—from choosing the right product to aftercare. A focus on **employee training** equips the staff to provide exceptional service, which in turn enhances customer loyalty.

- In the context of business strategy, investing in **human capital**—through employee development programs and customer-centric training—ensures that the company delivers consistent, high-quality experiences that differentiate it from competitors.

6. Process



The **process** refers to the systems and procedures that the company uses to deliver its products and services. For vision care companies, this includes everything from booking an appointment for an eye exam to the post-purchase service of adjusting or repairing eyewear.

Service Efficiency

- Efficient processes, such as automated appointment booking systems and streamlined checkout procedures, are essential for providing a smooth and hassle-free customer experience. **Online appointment scheduling** for eye exams, fast delivery of glasses or contact lenses, and easy returns or exchanges for products contribute to a positive customer journey.

Operational Excellence

- To support scalability and growth, the company must invest in **logistical infrastructure**, ensuring that products are delivered on time, inventory levels are optimized, and supply chains run efficiently.

- By focusing on process innovation, the company aligns its operational strategy with its marketing goals, creating efficiencies that ultimately reduce costs and improve customer satisfaction.

7. Physical Evidence

In the vision care sector, **physical evidence** refers to the tangible and intangible elements that contribute to the customer experience, from the layout of the store to the appearance of the website and product packaging.

Store Design and Layout

- Well-designed, aesthetically pleasing stores create an inviting environment that enhances the shopping experience. Factors such as clean, modern interiors, clear product displays, and well-organized sections for eye exams and frame fittings all contribute to a sense of professionalism and trust.

Website and E-Commerce Experience

- The company's website acts as a digital storefront. A user-friendly interface, clear product images, detailed descriptions, and smooth navigation are essential to building customer trust in online purchases.

Packaging

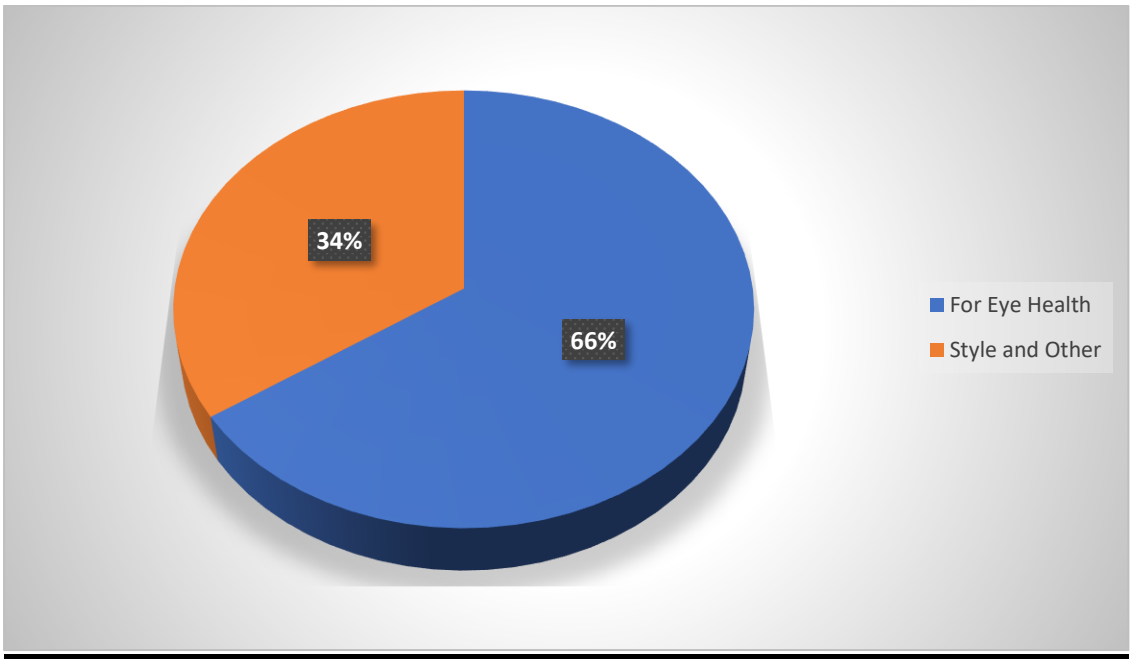
- The way products are packaged—whether using sustainable materials or luxurious designs can affect customer perception of the brand. high-quality, eco-friendly packaging demonstrates the company's commitment to sustainability, a growing concern among consumers.

- Physical evidence plays a significant role in branding and customer perception. A consistent, premium look and feel across all touchpoints help reinforce the company's positioning as a leader in vision care.

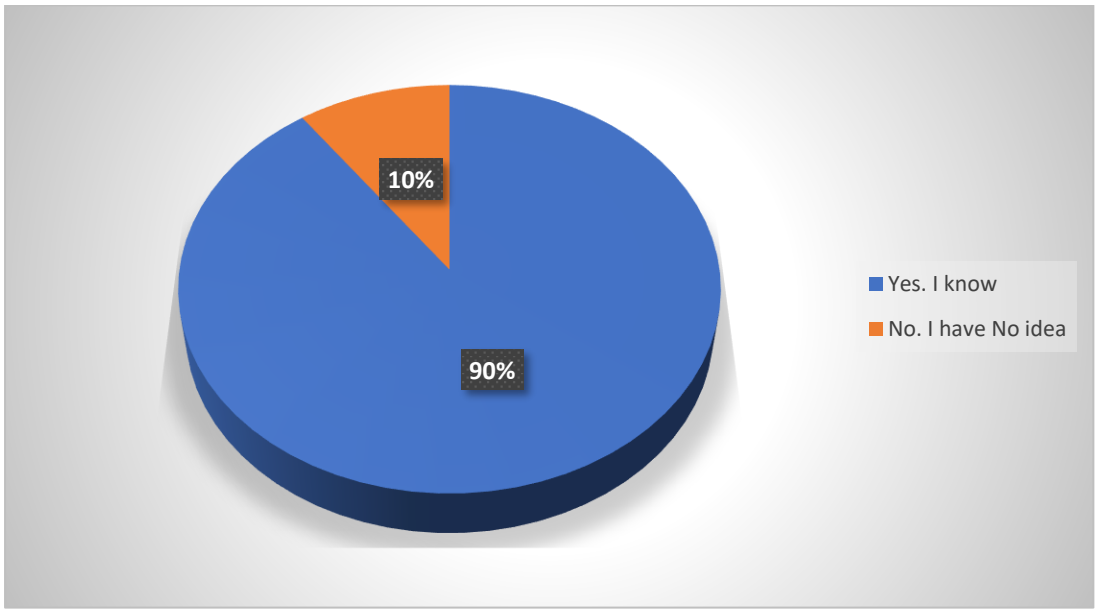
Customer Feedback Survey

A Google Form was distributed to collect data from our UCSC colleagues and other people. The survey asked questions about their experiences with Vision Care opticals' products, pricing, customer service, and product variety. Both qualitative and quantitative responses were analysed to understand the current market position of the company and areas for improvement. A total of 54 responses were added to this survey.

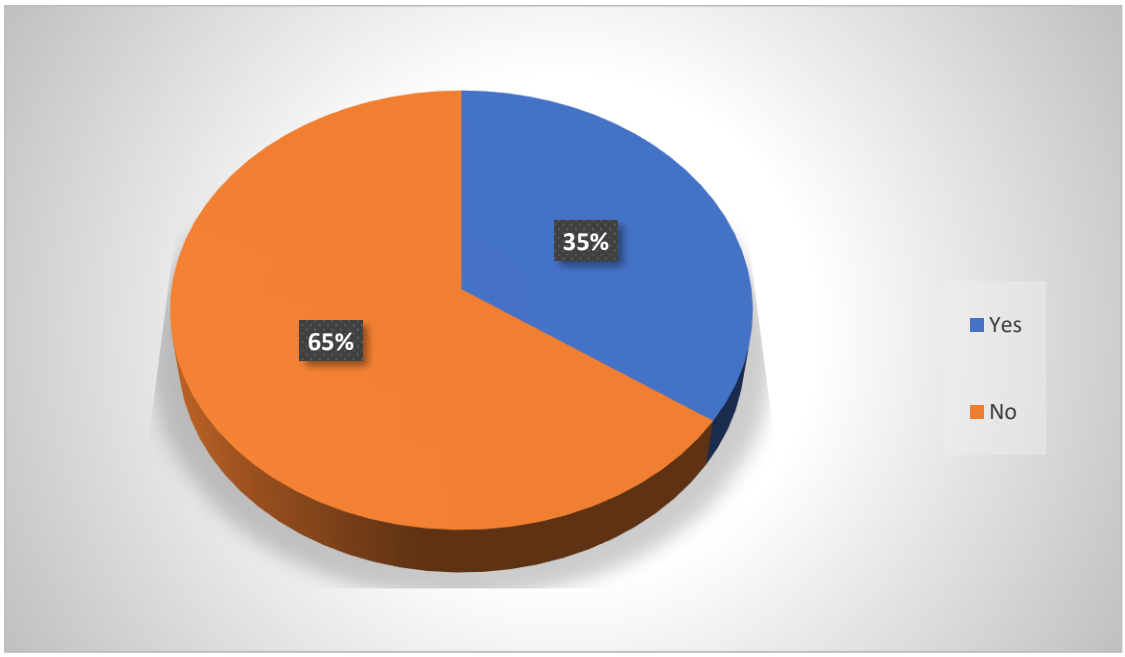
If you wear glasses, why do you prefer them?



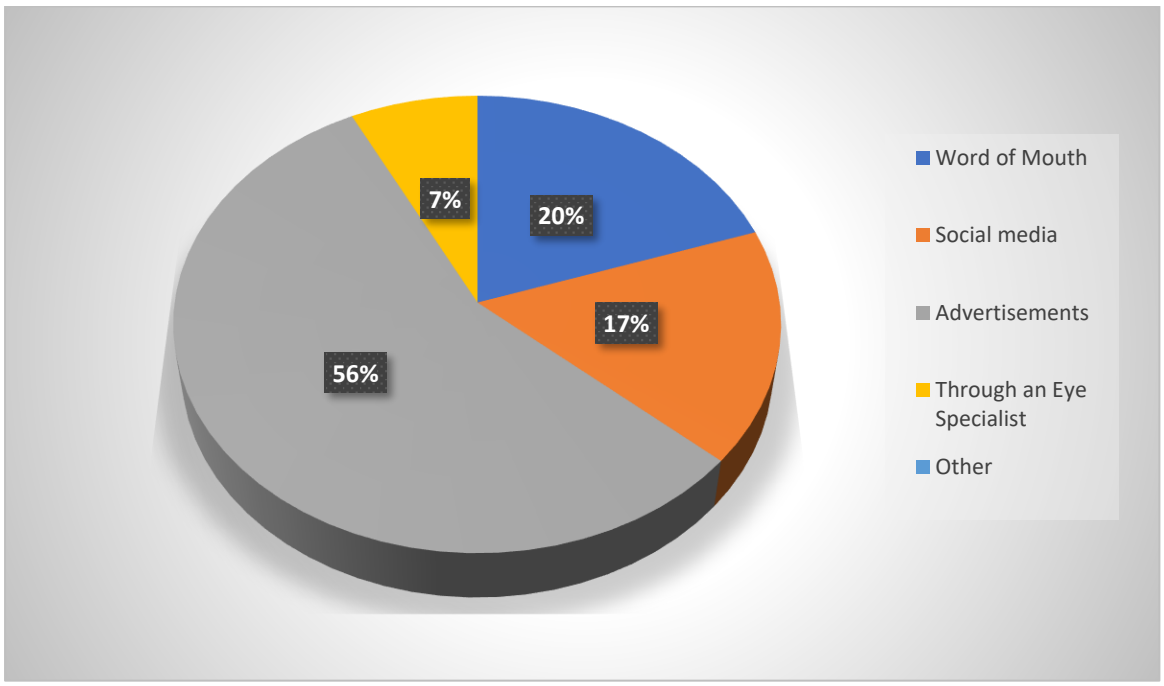
Do you know "Vision Care", the leading eye care provider in Sri Lanka that offers eye health services and hearing aids?



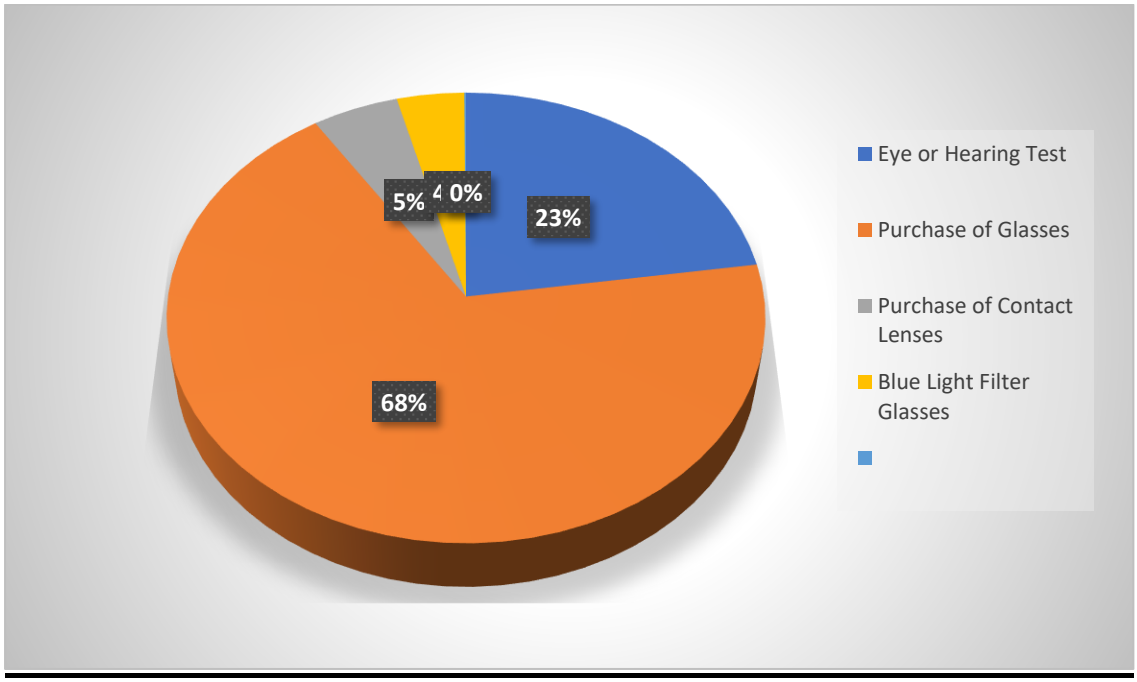
Do you follow "Vision Care" on social media for updates, promotions, or information?



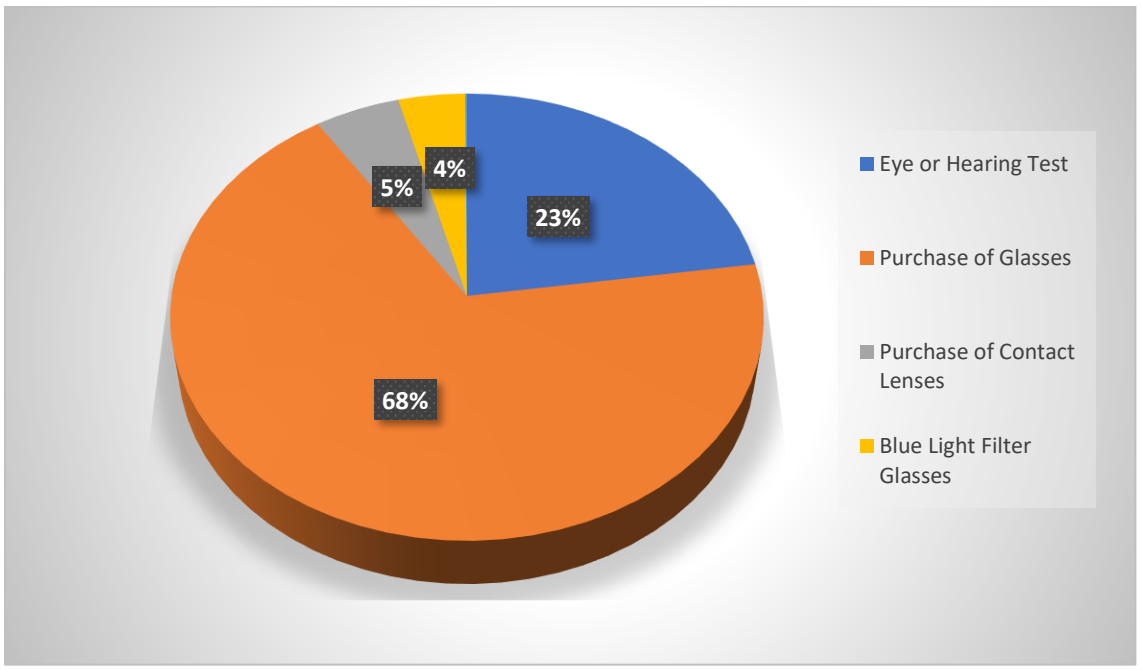
How did you first hear about "Vision Care"?



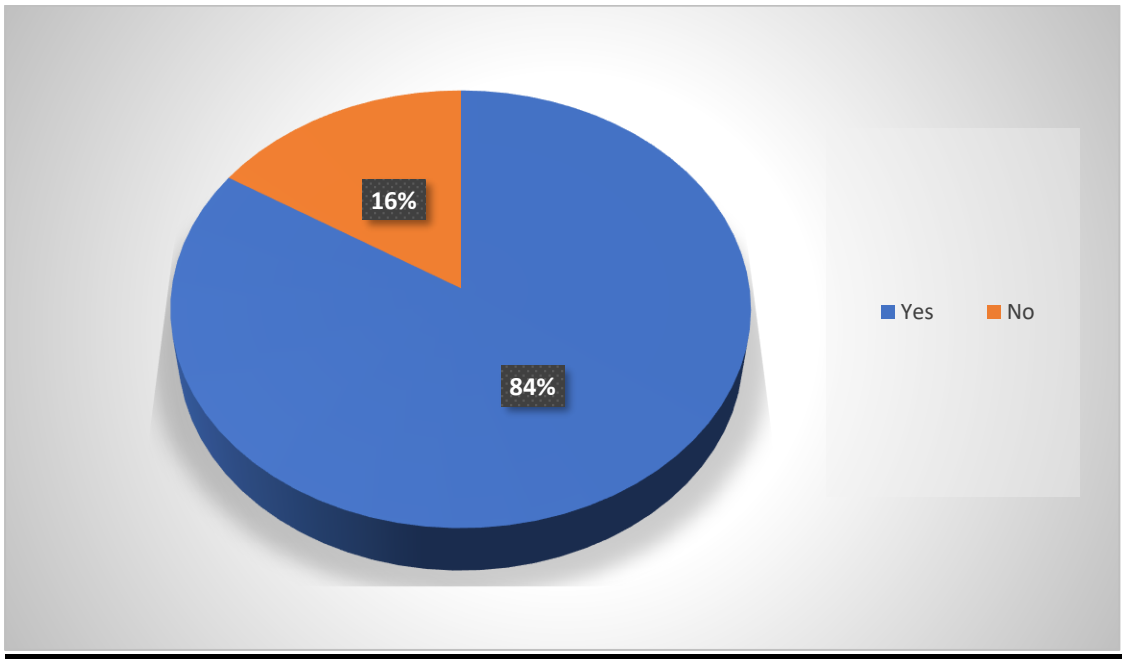
If you have had any experience with "Vision Care", what was it about?



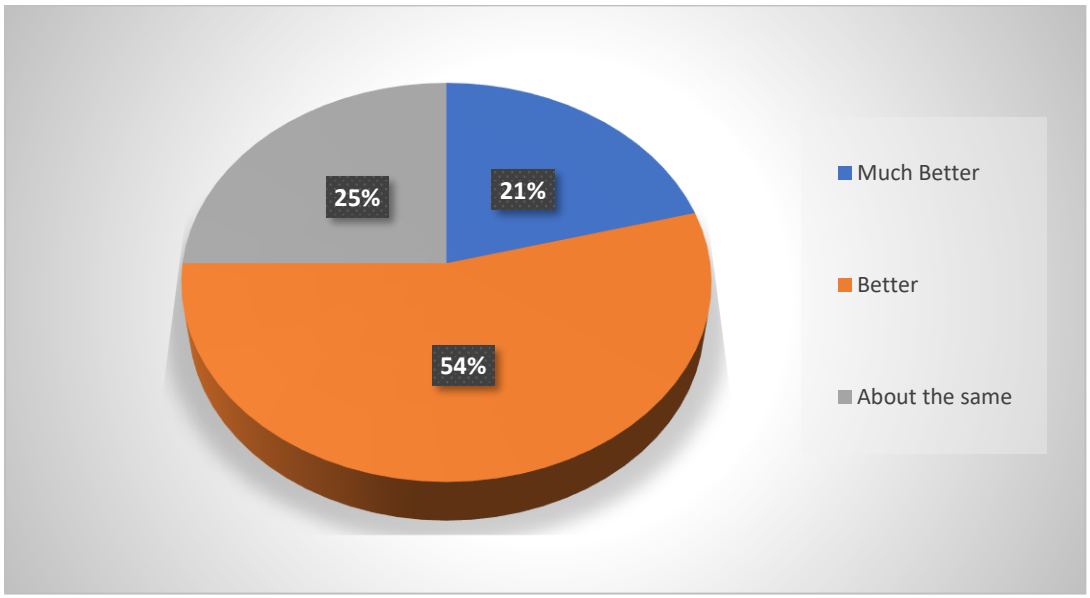
How was your experience with "Vision Care"?



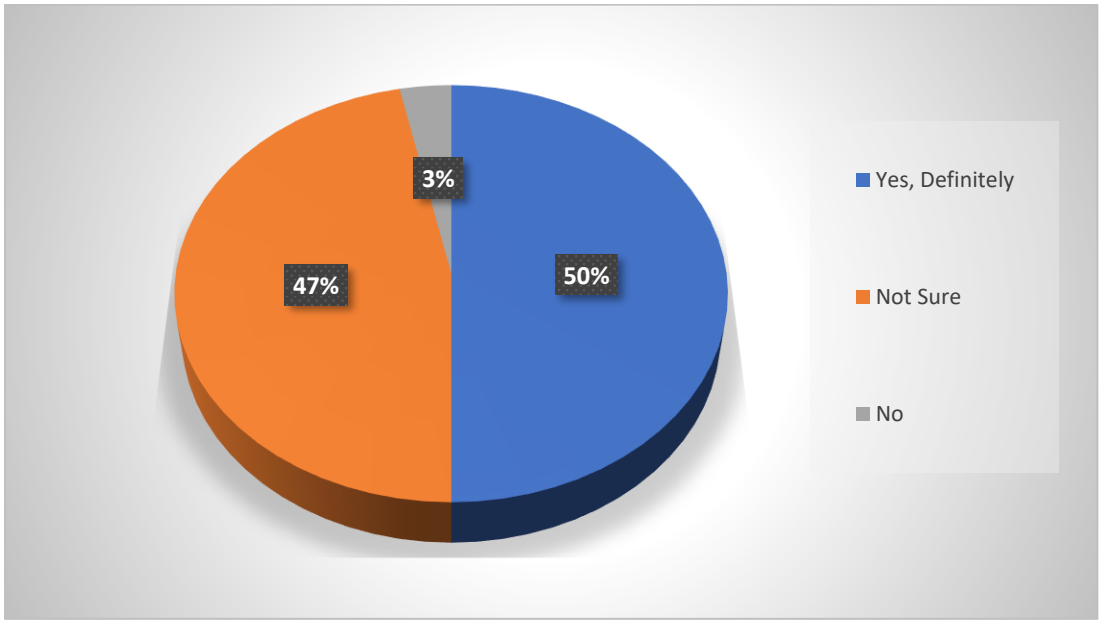
Were you satisfied with the range of frames and lenses available in the store?



How does "Vision Care" compare to other optical providers you have used?



If you were not a customer of "Vision Care" or were a past customer, would you choose "Vision Care" as your first choice to fulfil your requirements?



Business Strategies

(According to Porter's five forces, swot analysis and other analysis)

The following strategies can help Vision Care mitigate the impact of Porter's Five Forces and drive the company's advancement.

1. Enhanced Eye Care with Seamless Digital Solutions

In today's digital age, vision care providers must enhance customer experience by offering seamless online services. Key features like secure custom prescription uploads, integrated eye exam booking, and a streamlined checkout process improve convenience and accessibility. These digital solutions enable customers to manage their eye care needs easily and efficiently from home, making the overall experience smooth and user-friendly.

- **Custom Prescription Uploads**:

  Develop a secure system for customers to upload their prescriptions directly to the website. Include features to handle various prescription formats and ensure data privacy.

- **Integrated Eye Exam Booking**:

  Offer online scheduling for eye exams with real-time availability. Customers should be able to choose from a range of exam types and opt for a preferred time slot.

- **Seamless Checkout Experience**:

  Optimize the checkout process to be quick and easy, with multiple payment options including credit/debit cards, digital wallets, and financing options. Implement a streamlined return and exchange process.

In conclusion, in today's fast-paced, technologically-driven world, eye care providers must embrace digital technologies in order to improve the client experience. Businesses can give customers more convenience and accessibility by providing options like integrated eye exam booking, secure custom prescription uploads, and a smooth checkout experience. These improvements increase productivity while also giving clients the ability to handle their eye care requirements from the comfort of their own homes, which eventually boosts client happiness and loyalty. Investing in these digital advances would put vision care providers in a better position to stay competitive and satisfy the changing needs of contemporary consumers.

2. Create customer loyalty programs

In today's competitive landscape, customer loyalty is crucial for Vision Care's growth. To strengthen relationships and enhance the customer experience, we propose three key initiatives: a Discounts and Points System, Referral Programs, and Free Vision Check-Ups. These strategies aim to incentivize repeat business, attract new clients, and foster a value-driven environment that boosts customer satisfaction and loyalty.

- **Discounts and Points System:**

  Vision Care could introduce a points-based system where customers earn points on every purchase (e.g., eyewear, lenses, or optical services). These points can then be redeemed for discounts or free services in the future. For example, after a customer spends a certain amount, they can receive a discount on their next eyewear purchase.

- **Referral Programs:**

  Customers who refer new clients to Vision Care can be rewarded with store credits or discounts. This approach not only retains existing customers but also helps attract new clients through trusted recommendations.

- **Free Vision Check-Ups:**

  Vision Care could offer complimentary eye check-ups to repeat customers. This provides added value and encourages customers to return for regular services, leading to consistent engagement.

In conclusion, offering Free Vision Check-Ups, Referral Programs, and Discounts and Points Systems can greatly increase client loyalty and spur business growth for Vision Care. These programs offer clients observable advantages, stimulating customer loyalty and word-of-mouth recommendations. Vision Care can sustain a competitive advantage in the market, enhance customer happiness, and build long-lasting relationships by cultivating a value-driven and client-centric atmosphere. These tactics guarantee long-term company success by rewarding loyalty and bringing in new customers.

3. Partnerships and Community Engagement

Vision Care can form strategic partnerships with local organizations, NGOs, schools, and healthcare providers to further integrate eye care services into the community. This would allow Vision Care to expand its reach and strengthen its brand presence while contributing to public health initiatives.

- **Collaborations with Local Healthcare Providers:**

  Vision Care can partner with hospitals and clinics, ensuring seamless referral systems for patients in need of specialized eye care services. Offering vision care in conjunction with other health services would ensure holistic care for patients and make Vision Care the go-to partner for eye health.

- **Corporate Collaborations:**

  Partnering with local businesses and corporations to offer eye care solutions as part of employee health programs would be mutually beneficial. Vision Care could provide vision screenings or discounted eyewear to employees, strengthening its brand while promoting eye health.

- **Community Outreach Programs:**

  Partnering with local schools, Vision Care could organize vision screening camps for students. This not only builds early brand loyalty but also fulfils a social responsibility by addressing vision-related issues in children early on.

In conclusion, offering Free Vision Check-Ups, Referral Programs, and Discounts and Points Systems can greatly increase client loyalty and spur business growth for Vision Care. These programs offer clients observable advantages, stimulating customer loyalty and word-of-mouth recommendations. Vision Care can sustain a competitive advantage in the market, enhance customer happiness, and build long-lasting relationships by cultivating a value-driven and client-centric atmosphere. These tactics guarantee long-term company success by rewarding loyalty and bringing in new customers.

4. Differentiate products and services:

Convey the message of offering excellent customer care, use of cutting-edge technology, and value-added products. These can entail solutions such as customized eye care services, advanced diagnostic equipment, and designer sunglasses that make Vision Care unique from its rivals

- **Customer Care**:

  Highlighting their commitment to exceptional customer service by offering personalized consultations and follow-up care tailored to individual customers' needs.

- **Cutting-edge Technology**:

  Utilizing advanced diagnostic equipment, such as digital eye exams, 3D imaging, and other state-of-the-art tools to provide accurate and efficient eye care solutions.

- **Value-added Products**:

  Offering a unique range of products, such as customized lenses, prescription sunglasses, and exclusive designer frames, which cater to both functional and fashion-conscious customers.

In conclusion, by focusing on exceptional customer care, cutting-edge technology, and value-added products, Vision Care may effectively differentiate itself from its competition. Offering tailored consultations and follow-up treatment provides a high level of customer satisfaction, while the use of sophisticated diagnostic technologies enhances the quality and precision of eye care services. Moreover, offering distinctive and personalized goods like designer frames and prescription sunglasses appeals to clients who are both practical and fashion aware. With its all-encompassing strategy, Vision Care is positioned as a leader in the field, providing outstanding services that cater to its clients' changing demands.

Conclusion

In conclusion, Vision Care Optical Services (Pvt) Ltd has a solid opportunity within Sri Lanka owing to its established brand image, and a broad range of products and services, as well as emphasizing on customers' satisfaction and innovations. These management strategies are evident in the company's strong financial and growing market position. However, for Vision Care to maintain growth and competitiveness, it should focus on various issues including, increasing its online presence, supply chain management, and expansion to other regions. Therefore, by using these findings and overcoming the aforementioned challenges, Vision Care Optical can sustain its success and strengthen its position in the optical business.
